TECHNICAL SKILLS

DevOps & version control

Git, GitHub, branching strategies, pull requests, code reviews, release management

Containerisation

Docker, Dockerfiles, Docker images, Docker Compose, container lifecycle management

Cloud — AWS

EC2, S3, IAM, VPC, ECR, EKS — deployment, configuration, maintenance

CI/CD, IaC & orchestration

GitHub Actions, Terraform, Kubernetes, Helm, Prometheus, Grafana

Linux & scripting

Server administration, Bash, SSH, permissions, services, log

SUMMARY

DevOps Engineer with 1+ year of experience at Tata Consultancy Services deploying, containerising and maintaining applications using Git, Docker, AWS and Linux, plus 9 months as a Python/Django backend developer building secure REST APIs with JWT authentication. MSc Computer Science (Distinction), University of East London. Hands-on with CI/CD pipelines in GitHub Actions, Terraform infrastructure as code, and Kubernetes deployments on AWS EKS.

EXPERIENCE

Assistant System Engineer (DevOps)

Tata Consultancy Services (TCS), Hyderabad, India

FEB 2023 – MAY 2024

- Deployed and maintained 10+ applications to production using Git-based workflows, managing 12+ repositories and cutting typical release time from ~1 hour of manual steps to ~15 minutes.
- Reviewed and merged 200+ pull requests across a team of 6 developers, resolving merge conflicts early and reducing broken builds on the main branch.
- Containerised 8 applications with Docker, writing Dockerfiles and managing images, standardising environments and reducing new-developer setup time from ~1 day to under 1 hour.
- Deployed and maintained applications on AWS (EC2, S3, IAM), configuring instances, storage and access permissions across 3 environments (development, staging, production).
- Administered 10+ Linux servers (users, permissions, packages, services, logs), troubleshooting deployment and runtime issues.
- Handled routine and advanced maintenance of live projects, applying updates and patches and resolving 40+ production issues, most within the same working day.

Python Django Developer — Industrial Placement

University of East London

JUN 2025 – FEB 2026

- Developed 25+ REST API endpoints in Python, Django and Django REST Framework, exchanging data in JSON between frontend and backend services.
- Implemented JWT authentication to secure 15 protected endpoints.

analysis

Backend development

Python, Django, Django REST Framework, REST APIs, JSON, JWT, Postman

Languages

English, Telugu, Hindi — professional, spoken & written

EDUCATION

MSc Computer Science — Distinction
University of East London
May 2024 – Jan 2026

BEng Computer Science & Engineering
TKR College of Engineering, JNTU Hyderabad
Jul 2019 – May 2023

- Managed source code on GitHub using feature branches and pull requests, delivering 30+ features and bug fixes during the placement.

PROJECTS

End-to-End CI/CD Pipeline for a Django REST API

saianirudhB/django-rest-cicd-pipeline ↗

Built a GitHub Actions pipeline that lints, runs unit tests, builds a Docker image, pushes it to AWS ECR and deploys to EC2 automatically on every merge to main, authenticating via GitHub OIDC. Containerised a Django REST Framework API with JWT authentication and PostgreSQL using a multi-stage Dockerfile and Docker Compose — 21 unit tests, 99% coverage.

AWS Infrastructure as Code with Terraform

saianirudhB/aws-terraform-infrastructure ↗

Provisioned a VPC, public/private subnets, security groups, EC2 and IAM roles with reusable Terraform modules, with remote state in S3 and DynamoDB locking. Added terraform fmt, validate and plan checks to pull requests via GitHub Actions so infrastructure changes are reviewed before applying.

Kubernetes Deployment on AWS EKS with Helm and Monitoring

saianirudhB/eks-helm-monitoring-stack ↗

Packaged a containerised API as a Helm chart deploying Deployments, Services, Ingress, ConfigMaps, Secrets and a Horizontal Pod Autoscaler to AWS EKS. Set up Prometheus and Grafana dashboards for pod, node and application metrics, with alert rules for crash-looping pods and high CPU/memory.
